

**This map shows the status of the PSFD Fuels Management Projects at year end 2009.**

One of our objectives is to clear properties that border the Fuel Break. The purpose of this is to widen it for enhancement in case of catastrophic wildfire. In reviewing this map you will see the orange stripes and orange properties that were 2009 projects. This clearly reveals the effort that has been put into working the interior of the Fuel Break, as in comparison to earlier projects that are green and are located more randomly. Our program has grown considerably. We now have the capability of mapping our projects. This shows the progress within both communities. These GIS maps have been tied in with the USFS maps to show progress inside, and outside of the Fuel Break. We have a strong working partnership with the Tonto National Forest. This will help to create and improve strategies in our Fuels Management Programs in the future.

**PROGRESS SHOWN FROM 2008**
